Create Courier Request

+ ... ↗

Description

As a Sender Client,
I want to create a courier request by entering the pickup address, delivery address, package details, and preferred pickup time,
So that I can schedule a parcel delivery.

Match Nearest Rider

+ ... ↗

Description

As a Sender Client,
I want the system to automatically assign the nearest available delivery rider,
So that my parcel can be picked up quickly.

Optimize Delivery Route

Description

As a Delivery Rider,
I want the system to generate an optimized multi-stop delivery route,
So that I can complete deliveries faster and reduce travel time.

Complete Delivery

Description

As a Delivery Rider,
I want to mark the parcel as delivered after successful OTP verification,
So that the sender and recipient receive delivery confirmation.

Track Parcel

Description

As a Sender Client,
I want to track my parcel in real time,
So that I know its current location and estimated delivery time.

Verify OTP

Description

As a Delivery Rider,
I want to verify the recipient's OTP before handing over the parcel,
So that I can ensure the parcel is delivered to the correct recipient.

Sprints

Active Sprint Board

Burndown Chart

Reflection Questions

1. Did your estimations reflect the actual effort?

Ans :Yes. The story point estimates were reasonably close to the expected effort. Simpler tasks such as creating a courier request and OTP verification were assigned fewer story points, while route

optimization was given a higher estimate because it involved more complexity.

2. Was your backlog well-prioritized?

ANS: Yes. The backlog was prioritized based on the delivery workflow. Core features such as creating a courier request and assigning a rider were planned first, followed by tracking, OTP verification, and delivery completion in the next sprint.

3. How did your simulated sprint align with your plan?

ANS : The simulated sprint closely followed the planned workflow. All user stories assigned to each sprint were completed in the intended order, demonstrating that the sprint plan was achievable.

4. What insights did the burndown chart give about your team's capacity?

ANS: The burndown chart showed that all planned work was completed within the sprint. It indicated that the team's capacity was sufficient to finish the assigned story points without exceeding the planned workload.
